

OffenlegungsschriftDE 199 48 330 A1

5 The present invention relates to a method for
processing a plurality of pages read in with a reader
for the generation of a computer-readable data file.
In the case of the method in accordance with the
invention the pages that have been read in can be
10 processed further and/or forwarded without inclusion of
a special processing step in which the user has to
operate a computer since in the case of the method in
accordance with the invention use is made of a control
page that contains the commands for processing further
and/or forwarding the pages of text that have been read
15 in. This control page is in the first instance
identified in a first method step. Then the commands
that are contained on the control page are recognized
and subsequently the pages that have been read in and
are associated with the control page are processed
20 further and/or forwarded in accordance with the
commands.

25

In the case of the recognition of the commands that are
contained on the control page, the checked-off check-
boxes that are located at a pre-determined point on the
control page are detected. The commands that are
30 stored for the check-boxes are invoked and processed.
